

2026 OPERATIONAL
EDITION

Commercial Workflow Handbook

QuickFind and the complete research-to-renewal operating model.

GRIDFLOW STANDARD

Use this beside the interactive GridFlow Academy. Tick the practical checks as you complete them; never record passwords, verification codes or private provider keys in this document.

The operating principle

GridFlow is a connected commercial record. Each stage should reuse verified information from the previous stage. Automation handles preparation and internal coordination; a person controls relationships, sending, meetings, deal stages, prices, signatures and payments.

QUICKFIND

QuickFind is an instant view of existing researched records. It is not a live people-search engine and does not invent or infer an email address.

01

Profile and LinkedIn

Create the truthful athlete and commercial context that later tools can reuse.

- ☐ Maintain the LinkedIn public URL.
- ☐ Refresh programme facts when the season changes.

02

Discovery Briefs

Define region, industries, theme and company volume. Activate only focused strategies.

- ☐ One clear mission per brief.
- ☐ Start small and review quality.

03

Atlas

Discovers plausible sponsor companies for the active brief and records why each may fit.

- ☐ Check identity and domain.
- ☐ Reject irrelevant companies.

04

Sage

Researches public evidence and scores commercial fit. Scores prioritise review; they are not facts.

- ☐ Open sources.
- ☐ Check dates.
- ☐ Remove unsupported claims.

05

Relay and QuickFind

Relay identifies plausible decision-makers and records verification, provenance and available channels. QuickFind ranks these stored contacts by company name.

- ☐ Never guess email patterns.
- ☐ Confirm current role before contact.

06

Echo and outreach

Echo prepares a personalised draft from approved context. LinkedIn is the default first channel.

- ☐ Human edits and approves.
- ☐ Human performs LinkedIn action.
- ☐ Record the real outcome.

07

Pulse, Sentinel and Nova

Pulse times safe follow-ups. Sentinel classifies replies and stop signals. Nova prepares response strategy.

- ☐ Replies and opt-outs stop sequences.
- ☐ Uncertain classifications get review.

08

Opportunities and Orbit

Create an opportunity only after meaningful qualification. Orbit prepares and debriefs real meetings.

- ☐ Stage and value stay honest.
- ☐ Next action always has an owner and date.

09

Forge and Seal

Forge prepares proposal packages from a real opportunity. Seal controls exact contract versions, signers and payment schedules.

- ☐ Human approves terms.
- ☐ External signature/payment evidence is verified.

10

Delivery and Renewals

Delivery tracks obligations and evidence against the active contract. Renewals use verified performance plus human-recorded sponsor feedback.

- ☐ No invented delivery proof.
- ☐ Freshness checked before renewal handoff.

QuickFind decision guide

Best match means the highest-ranked stored contact for that company. Prefer a primary contact whose role relates to partnerships, marketing, commercial leadership or - at a small business - executive ownership. Verification and confidence should inform your review, not replace it.

Situation	Correct next action
Company and verified contact found	Open LinkedIn, confirm the person is current, then review the contact record and outreach context.
Company found; contact unknown	Open the company and run or retry Relay through the controlled pipeline.
Company not found	Create or refine a Discovery Brief and let Atlas research it with evidence.
Email missing	Keep it unknown. Use the verified LinkedIn-first path or conduct lawful source research.

Daily operating rhythm

Start in Command Centre. Resolve urgent human decisions first, then failures and broken integrations, then overdue relationship work. Use QuickFind when a company comes up in conversation. Finish by recording real outcomes so the next recommendation is based on truth.

- ☐ Review Approval Inbox
- ☐ Check replies and stop signals
- ☐ Open today's next actions
- ☐ Record LinkedIn actions and meetings
- ☐ Keep company/contact facts current
